

AGB Vig-Grain Plus

For Optimum Germination and Early Growth

Description

Vig-Grain Plus is an Australian made seed coating product which has been specifically formulated to supply sufficient levels of essential trace elements required for optimum germination and early growth of cereals, legumes, horticultural row crops and pastures.

AGB Vig-Grain Plus is a liquid not a powder, therefore it can be evenly mixed with seed to ensure uniform coverage and germination. Vig-Grain Plus dries quickly on seed and also contains a binding agent to provide optimum utilization of the product without wastage.

The Vig-Grain Plus liquid dries evenly on seed, it does not cause blockages to sensitive seed drilling equipment unlike some powdered formulations. It is also unique in that the nutrients are absorbed directly into the seed rather than simply coating it, therefore allowing immediate utilization by the germinating seed.

For further information please contact Agmin on the details below.

General Application Rates

- **Slight Deficiency (Maintenance):** 6.0 L/Ton
- **Moderate Deficiency:** 7.0 L/Ton
- **Severe Deficiency:** 8.0 L/Ton

The application rates above are guidelines. Agmin always recommends consultation with your local agronomist to base the application rates on soil and plant tissue testing, paddock history, environmental factors, soil conditions, and crop type. For more information on these topics please see Agmin's brochure marked "Foliar Nutrients".

Constituents

Minimum Guaranteed Analysis

Sulphur (S)	3.50	% w/v
Copper (Cu)	0.12	% w/v
Zinc (Zn)	6.00	% w/v
Manganese (Mn)	2.00	% w/v
Cobalt (Co)	0.01	% w/v
Molybdenum (Mo)	0.06	% w/v

with lignosulphonate binder; surfactants; penetrants.

The Agmin Benefit

Agmin is at the forefront of research and development of chelated (protected) liquid nutrient fertilizers. The efficacy of foliar absorption of fertilizer elements is targeted to be optimized by binding agents assisting in rain fastness, penetrants to open increased number and area of pore sites, and surfactants to reduce surface tension of liquid droplets on plant surfaces. The formulations development is to prevent the greatest financial losses in fertilization, that is, the fixation of soil nutrients by adverse soil reactions. Agmin is committed in delivering quality products with high nutrient absorption and utilization for increased crop productivity and profit.
